

SLOTHS!!

MADE BY ELLIOT C. 😊😊😊

Where do they live?

Sloths live in the tropical rainforests of Central and South America. They spend most of their time in trees.

What do they look like?

Sloths are around the size of a cat and weigh about 3.5 to 4 kg. They have a round head, a short snout, small eyes, long legs, tiny ears and a stubby tail.

Because of the way their mouth is shaped, they look like they are always smiling.

Sloths are very good climbers because their feet have three curved claws instead of toes, that allow them to hook onto tree branches and hang upside-down

What do they eat?

Sloths enjoy a low energy diet of fruit, twigs, and leaves. They process food very slowly; it can take a sloth a month to digest a single meal!

Interesting Facts.

Sloths' fur is brown, but because of algae growing on it, it sometimes appears green, which helps them to camouflage.

Sloths only come down to the ground once a week... to do their WEEKLY number 2s!!!
