

Magnetic Materials Investigation

Amazing Fact

In ancient times, the Greeks and Romans thought that magnets were magic because of how they were attracted to some metals.

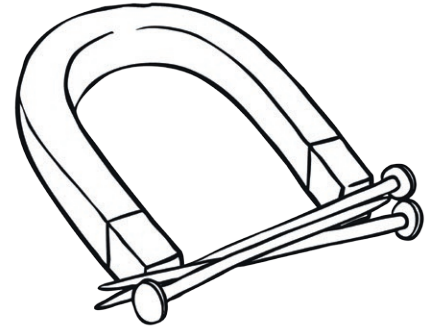

Challenge

When a material is magnetic you will feel a 'pull' when you put the magnet near the object. This means the material is magnetic.

Investigate which objects are magnetic and which are not. Make a prediction before you test the object.

You will need:

- A magnet
- Different objects

Object	My Prediction	Outcome

You could also try to find out:

- where on earth most iron is found;
- what iron is used for;
- how iron was discovered.
